

LITHIC IMPLEMENT

Unique ID: SUSS-A9FD54

Object type certainty: Certain

Workflow status: Awaiting validation

27 flakes, weighing 300g of waste flint flake material, debitage and associated flakes. The flakes all have either ripples of percussion, a hinge fracture, secondary retouch, a surviving bulb of percussion or a striking platform, which indicate that they have been worked.

Notes:

These flints form part of a large collection of lithic implements and associated waste flakes. Known as the Warnham Collection these lithic implements are housed by the finder and are available for further study should someone want to research the flints further. These database entries are a basic record of what is contained within the collection. The finder can be contacted via the local Finds Liaison Officer. Awaiting donation to Horsham Museum.

Subsequent actions

Current location of find: Awaiting donation to Horsham Museum.

Subsequent action after recording: Returned to finder

Chronology

Broad period: MESOLITHIC

Subperiod from: Early

Period from: MESOLITHIC

Subperiod to: Late

Date from: Circa 8300 BC

Date to: Circa 3500 BC

Dimensions and weight

Quantity: 27

Weight: 300 g

Discovery dates

Date(s) of discovery: Friday 1st June 2007

Personal details

This information is restricted for your access level.

Other reference numbers

Other reference: Available for further study.

Materials and construction

Primary material: Flint

Manufacture method: Knapped/flaked

Completeness: Fragment

Spatial metadata

Region: [South East](#) (European Region)

County or Unitary authority: [West Sussex](#) (County)

District: [Horsham](#) (District)

To be known as: Warnham

Spatial coordinates

Grid reference source: From a paper map

Unmasked grid reference accurate to a 0.01 metre square.

Discovery metadata

Method of discovery: Fieldwalking

Current location: Awaiting donation to Horsham Museum.

General landuse: Cultivated land

Specific landuse: Character undetermined
