

BUCKLE

Unique ID: LIN-16FE46

Object type certainty: Certain

Workflow status: Awaiting validation

Unusual copper alloy buckle. The buckle frame is in the form of a solid flat C-shape with scroll-like terminals which do not meet together. The entire face is decorated with a double moulded zig-zagged line with a flower head in the remaining triangular cells. The two scroll-like terminals each have a large flower head. There is a broken iron pin bar across the centre on the reverse. The pin is missing. A parallel to this object could not be found at the time of writing, but has been attributed to the late 15th century based on its style.
