

LITHIC IMPLEMENT

Unique ID: SUSS-D7F112

Object type certainty: Certain

Workflow status: Awaiting validation

No. 1 on the attached photograph. A late Upper Palaeolithic non-geometric microlith, dating from 11,000 BC to 8,300 BC. Multiple bladelet / flakes have previously been removed from the surface of the flake. There is evidence of retouch.

Notes:

These flints form part of a large collection of lithic implements and associated waste flakes. The finder was collecting flints from the 1960 onwards up to the present day. The collection spans areas in East Sussex and Kent. Known as the Lambert Collection these lithic implements are housed by the finder and are available for further study should someone want to research the flints further. These database entries are a basic record of what is contained within the collection. The finder can be contacted via the local Finds Liaison Officer. Re-identified by Chris Butler in November 2007. The description given follows this new identification.

Subsequent actions

Current location of find: Lambert Collection - housed by the finder

Subsequent action after recording: Returned to finder

Chronology

Broad period: PALAEOLITHIC

Subperiod from: Late

Period from: PALAEOLITHIC

Date from: Circa 11000 BC

Date to: Circa 8300 BC

Dimensions and weight

Quantity: 1

Length: 50.5 mm

Width: 13.1 mm

Thickness: 2.7 mm

Weight: 1.9 g

Discovery dates

Date(s) of discovery: Friday 1st January 1965

Personal details

Found by: This information is restricted for your login.

Recorded by: Mrs Liz Andrews-Wilson

Identified by: Mrs Liz Andrews-Wilson

Secondary identifier: Chris Butler

Other reference numbers

Other reference: Lambert Collection photo L154

Materials and construction

Primary material: Flint

Manufacture method: Knapped/flaked

Completeness: Complete
