

# FLAKE

**Unique ID:** HAMP-D57282

Object type certainty: Certain

Workflow status: Awaiting validation

A small tertiary flint flake, undiagnostic, and so given a general prehistoric date. It is of a grey brown colour, with some patinisation resulting in a lighter grey patch on both faces, and a darker surround on the dorsal face. There is some edge damage which is estimated to have occurred in antiquity, but the flake is in otherwise good condition.
