

BROOCH

Unique ID: WMID5262

Object type certainty: Certain

Workflow status: Published

The brooch was probably originally circular in plan. However, the edges of it are now heavily abraded and the brooch is a sub-oval shape in plan. The upper surface of the brooch has a circular central cell within a high relief annulet. The field outside of the annulet is a circular ring shaped cell which is incompletely filled with red enamel. The reverse of the brooch is undecorated and has the remains of parallel lugs on one edge, and a single lug opposite, which was probably originally the catchplate. The patina is a light green colour.

Class: Disc Brooch

Subsequent actions

Subsequent action after recording: Returned to finder

Chronology

Broad period: ROMAN

Period from: ROMAN

Period to: ROMAN

Date from: Circa AD 200

Date to: Circa AD 100

Dimensions and weight

Quantity: 1

Length: 19.1 mm

Width: 13.04 mm

Thickness: 3.21 mm
