

# BRACELET

**Unique ID:** SUR-9ABB65

Object type certainty: Probably

Workflow status: Awaiting validation

A copper alloy probable bracelet terminal. The terminal is circular in section with a diameter at the break of 5.02mm, and at the terminal of 10.85mm. There is a notched collar between grooves and the flat end has silver plating. The surface patination is dark brown and active bronze disease is present where the surface is not present.

## Notes:

The terminal is not closely diagnostic, but the surface patina is suggestive of a later Iron Age date.

## Subsequent actions

Subsequent action after recording: Returned to finder

## Chronology

Broad period: IRON AGE

Period from: IRON AGE

Period to: ROMAN

Date from: Circa 300 BC

Date to: Circa AD 400

## Dimensions and weight

Quantity: 1

Weight: 14.28 g

## Discovery dates

Date(s) of discovery: Tuesday 1st February 2011 - Monday 28th February 2011

## Personal details

This information is restricted for your access level.

## Other reference numbers

Other reference: 11-613

## Materials and construction

Primary material: Copper alloy

Manufacture method: Cast

Completeness: Complete  
Surface Treatment: White metal coated
