

MOUNT

Unique ID: SF-A7BDC5

Object type certainty: Probably

Workflow status: Awaiting validation

A copper alloy Post- Medieval mount or possible buckle plate. It is incomplete due to old breaks, and has been made from sheet metal. The central area is circular and has a rivet hole at its centre. There are two narrow arms protruding from one side, apparently incomplete, suggesting that the object was folded back at this point, to create a pin-slot or gap for suspension, as with a buckle plate. A rectangular extension on the opposite side terminates with two small triangular projections, with space for a third (now missing due to old breaks). There is a small rivet hole near the centre of this terminal. There are transverse grooves decorating the surface of the object, and obscured by corrosion. The mount measures 29.68mm in length, 13.16mm in width, 1.9mm in thickness and weighs 2.82g.

Subsequent actions

Subsequent action after recording: Returned to finder

Chronology

Broad period: MEDIEVAL

Period from: MEDIEVAL

Date from: Circa AD 1300

Date to: Circa AD 1500

Dimensions and weight

Quantity: 1

Length: 29.68 mm

Width: 13.16 mm

Weight: 2.82 g

Discovery dates

Date(s) of discovery: Saturday 1st October 2011

Personal details

This information is restricted for your access level.

Other reference numbers

Other reference: finder's ref.91

Materials and construction

Primary material: Copper alloy

Completeness: Incomplete

Spatial metadata

Region: [Eastern](#) (European Region)

County or Unitary authority: [Suffolk](#) (County)

District: [St. Edmundsbury](#) (District)

To be known as: Brockley

Spatial coordinates

Grid reference source: GPS (from the finder)

Unmasked grid reference accurate to a 0.01 metre square.

Discovery metadata

Method of discovery: Metal detector

General landuse: Cultivated land

Specific landuse: Character undetermined
