VESSEL

Unique ID: BUC-73A1A7

Object type certainty: Certain Workflow status: Awaiting validation

Late medieval - post medieval cast copper alloy pot foot and part of the leg. The leg is triangular in section with a flat back, and rounded corners; it is broken off just above a transverse collar with an old break. The prominent collar is rounded in section. The foot is also D shaped in section. The base of the foot is rounded.

Crudely made cast copper alloy vessels were widely used from c. AD 1200-1700 for serving and cooking. Butler et al (2009:4) suggest there were four main types of leg used. This is a type B which they suggest was already in use by the late 15th century

Class: Cooking Sub class: leg and foot

Chronology

Broad period: POST MEDIEVAL Period from: MEDIEVAL Period to: POST MEDIEVAL Date from: Circa AD 1450 Date to: Circa AD 1700

Dimensions and weight

Quantity: 1 Length: 43.01 mm Width: 27.47 mm Thickness: 14.38 mm

Personal details

This information is restricted for your access level.

Materials and construction

Primary material: Copper alloy Manufacture method: Cast Completeness: Fragment

Spatial metadata

Region: South East (European Region)

County or Unitary authority: <u>Oxfordshire</u> (County) District: <u>Vale of White Horse</u> (District) To be known as: Cumnor

Spatial coordinates

Grid reference source: From a paper map Unmasked grid reference accurate to a 0.01 metre square.

Discovery metadata

Method of discovery: Metal detector General landuse: Cultivated land
