WEIGHT

Unique ID: PUBLIC-138876

Object type certainty: Certain

Workflow status: Awaiting validation

A complete, cast lead alloy, weight of post medieval date. The weight is flat and broadly circular in plan. It has an abraded , irregular rim, which is most prominent on the top side. The irregular nature of the rim is probably due to movement in the plough soil. On both sides of the weight is a central indentation. The only markings are four irregularly spaced, incised ringlets on one half of the top side. The weight has a yellow grey patina all over.

The maximum diameter of the weight is 30.5mm, and its maximum thickness, at the rim, is 5.4mm. It weighs 23.95g (0.845oz).
