

BUCKLE

Unique ID: PUBLIC-ACA0D0

Object type certainty: Certain

Workflow status: Published

Post-medieval copper-alloy double-looped asymmetrical buckle frame, perhaps from a shoe, with white-metal coating. One loop is rectangular, the other D-shaped internally and with a pointed outer edge. The central bar appears to have been of iron and survives, although very corroded. There is a good parallel in Whitehead (2003, no. 598), also with an iron bar and white-metal coating; Whitehead dates this example to c. 1660-c. 1720. These buckles are usually small, and this one measures 26.37 x 21.61mm. It is 4.46mm thick and weighs 5g.

Subsequent action after recording: Returned to finder

Chronology

Broad period: POST MEDIEVAL

Period from: POST MEDIEVAL

Period to: POST MEDIEVAL

Date from: Circa AD 1660

Date to: Circa AD 1720

Dimensions and weight

Quantity: 1

Length: 26.37 mm

Width: 21.61 mm

Thickness: 4.46 mm

Weight: 5 g

Discovery dates

Date(s) of discovery: Wednesday 2nd April 2014

Personal details

This information is restricted for your access level.

Materials and construction

Primary material: Copper alloy

Completeness: Complete

Spatial metadata

Region: [North West](#) (European Region)

County or Unitary authority: [Cheshire East](#) (Unitary Authority)

District: [Cheshire East](#) (Unitary Authority)

To be known as: Mill Lane

Spatial coordinates

Grid reference source: GPS (from the finder)

Unmasked grid reference accurate to a 0.01 metre square.

Discovery metadata

Method of discovery: Metal detector

General landuse: Cultivated land

Whitehead, R., 2003 [Buckles 1250-1800](#) Chelmsford: Greenlight Publishing
