

UNIDENTIFIED OBJECT

Unique ID: SF-853296

Object type certainty: Certain

Workflow status: Awaiting validation

An incomplete lead-alloy unidentified object of uncertain date. It is conical in shape with the apex ending in an inverted cone below a circular section. It is hollow and broken into two pieces. The sides of the conical surface are decorated circumferentially with five equidistant bands of four slightly raised lines.

It could be a modern decorative element or a handle of some kind, toy fragment or small tool. The use is unknown and no parallel can be found. The alloy suggests a possible modern date.

For comparison see HESH-020723 in PAS database.

Length of the re-joined pieces: 32.69 mm

Diameter: 7.31 mm

Weight: 3.63 g
