

CUFF LINK

Unique ID: SWYOR-913F61

Object type certainty: Certain

Workflow status: Awaiting validation

A gold cufflink, one, of a pair of cufflinks, of eighteenth or nineteenth century date, AD 1750 - 1900. The frames of both discs or elements and the linking strip survive.

Each disc was oval and made of a separate material which no longer survives. Each has an oval gold mount or frame which is a reeded strip formed into a loop, with six projecting lugs which would have clipped to the missing part. Each frame has an integral, flat central strip connecting the short sides across the back of the disc. On the reverse of each strip is a hemispherical loop. One frame appears to be the original shape but the other is bent and distorted.

The two loops on the reverse of each frame articulate with and are joined by a short bar, also of gold, with rounded ends, each end being perforated with a circular hole. Between the holes is a decorative element consisting of a square with rounded corners and biconcave sides, pierced by a lozenge shaped hole with concave sides. In each corner of the outer square is a small circular perforation.

The whole cufflink is 16.4mm long, 14.6 wide and 11.9mm thick. It weighs 2.28gm.

Notes:

This object was considered by the Treasure Team at the British Museum as potential Treasure, but it was decided that it is post-dates 1717 and thus does not meet the requirements of the 1996 Treasure Act.

Class: set
