Unique ID: IOW-4ACD5B

Object type certainty: Certain

Workflow status: Awaiting validation

A complete post-Medieval lead alloy circular double-sided token (c. 1500-c. 1850). Powell Type 10.

The token has raised bust facing right on one side. The other side may have a design but it is worn and unclear. Each side has a raised rim.

This token is brownish buff.

Diameter: 20.3mm. Weight: 7.58g.

Lead tokens had a wide variety of potential uses such as tallies, gaming pieces, tickets, weights, etc. and are believed to have been locally produced; they are therefore difficult to date precisely. Those carrying initials are generally deemed to be post-Medieval in date (1500-1850), those which seem to mimic Medieval penny designs are deemed to be Medieval, the remainder which carry stylised designs remain difficult to date but the majority are probably post-Medieval in date c. 1500-1850.

The Powell classification system, in which there are over 30 categories, attempts to classify these leaden tokens according to the designs featured on each face, but it does not assign any dating information to the design typology.
