# **LEAF ARROWHEAD**

**Unique ID:** PUBLIC-901667

Object type certainty: Certain Workflow status: Published

A complete leaf shaped flint arrowhead of probable earlier Neolithic date ( $4000 - 2700 \ BC$ ) formed on a tertiary flake. The arrowhead is ogival / lentoid (a diamond shaped lozenge) in plan and lentoid in cross section. The arrowhead has been knapped from a mottled light-grey to brown flint which is opaque in places. Both faces of the flint show invasive, scaled, low angled retouch, with one face showing a slight scar, probably caused by a plough or similar machinery. The form is similar in shape to Green's Class 3B or 4B

The arrowhead measures 26.5mm length, 14.9mm width, is 2.6mm thick and weighs 1.1 grams

Subsequent action after recording: Returned to finder

### Chronology

Broad period: NEOLITHIC Subperiod from: Early Period from: NEOLITHIC Subperiod to: Middle Period to: NEOLITHIC Date from: Circa 4000 BC Date to: Circa 2700 BC

### **Dimensions and weight**

Quantity: 1 Length: 26.5 mm Width: 14.9 mm Thickness: 2.6 mm

Weight: 1.1 g

### **Discovery dates**

Date(s) of discovery: Tuesday 18th October 2016

#### Personal details

This information is restricted for your access level.

#### **Materials and construction**

Primary material: Flint

Manufacture method: Knapped/flaked

Completeness: Complete

# **Spatial metadata**

Region: West Midlands (European Region)

County or Unitary authority: <a href="County of Herefordshire">County of Herefordshire</a> (Unitary Authority)

District: County of Herefordshire (Unitary Authority)

To be known as: Leintwardine

# **Spatial coordinates**

Grid reference source: GPS (from the finder) Unmasked grid reference accurate to a 0.01 metre square.

# **Discovery metadata**

Method of discovery: Chance find during metal detecting Discovery circumstances: Found whilst metal detecting

General landuse: Cultivated land

Specific landuse: Operations to a depth greater than 0.25m
