

SPEARHEAD

Unique ID: PUBLIC-A8019C

Object type certainty: Certain

Workflow status: Awaiting validation

An incomplete Bronze Age copper alloy socketed spear, dating from the mid/late Bronze Age period. The spear is very worn, and would probably have been broader. The tip of the spear is blunt, as well as the blades. The blade wings are abraded and irregular, with the socket being broken, with small pieces of wood still inside. The damage to the socket may have occurred before post-deposition, possibly from the result of action of some sort.

Class: socketed

Subsequent actions

Subsequent action after recording: Returned to finder
