# THIMBLE

## Unique ID: SOM-35B668

Object type certainty: Certain Workflow status: Published

A Post Medieval copper alloy ring type seamless thimble dating to c AD1520-1600. There are circumferential upper and basal plain bands with with one groove, and a right-hand spiral of reversed-D indentations. At the start of the spiral is a maker's mark showing a V shape connected to an oval. The thimble measures 21.97mm in diameter at the top, 23.49mm at the base, is 1.71mm thick and weighs 4.34g.

Similar examples can be found in Read (2018), e.g. nos 26 and 42. He states that these type of thimbles were possibly from Nuremberg and probably cast. They have punched indentations and can have circumferential ridges or grooves. He suggests a date of c.1520-1600 for this type (2018, 14-15). A reference is also made to this type of thimble by Holmes (1988, 3). The maker's mark could not be identified.

Class: ring

## Chronology

Broad period: POST MEDIEVAL Period from: POST MEDIEVAL Period to: POST MEDIEVAL Date from: Circa AD 1520 Date to: Circa AD 1600

## **Dimensions and weight**

Quantity: 1 Thickness: 1.71 mm Weight: 4.34 g Diameter: 23.49 mm

#### **Discovery dates**

Date(s) of discovery: Saturday 1st December 2018 - Monday 4th March 2019

#### **Personal details**

This information is restricted for your access level.

#### **Other reference numbers**

Other reference: SCC receipt 018336

## Materials and construction

Primary material: Copper alloy Completeness: Complete

# **Spatial metadata**

Region: <u>South West</u> (European Region) County or Unitary authority: <u>Dorset</u> (County) District: <u>West Dorset</u> (District) To be known as: Piddletrenthide

# **Spatial coordinates**

Grid reference source: From finder Unmasked grid reference accurate to a 0.01 metre square.

# **Discovery metadata**

Method of discovery: Metal detector General landuse: Cultivated land
